

SKID SHOES

ENHANCED COVERAGE

CUSTOM MADE TO FIT YOUR ASPHALT EQUIPMENT
ABRASION RESISTANT MATERIAL WITH A HARDNESS UP TO 62 HRC
COVERAGE TO ENSURE THE WEAR LIFE INCREASES ON ANY MACHINE

ISO 9001:2015 Certified

JADCOMFG.COM

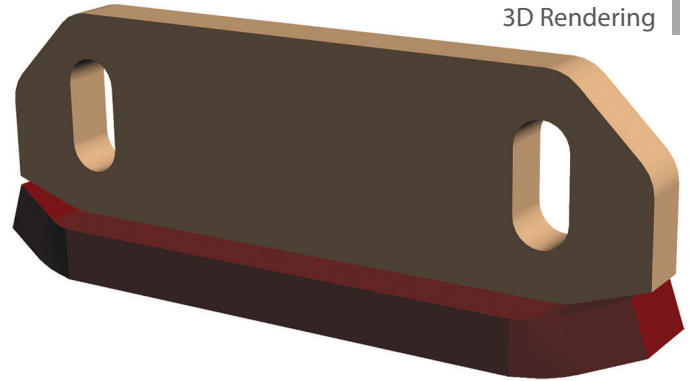

PROVEN PROTECTION... FOR **IMPACT** AND **ABRASION CHALLENGES**

ENHANCED COVERAGE AGAINST THE HARSHEST WEAR

Design Staff

Our technical support team is onsite ready to assist with drawings and work directly with your engineers. To ensure complete customer satisfaction, JADCO provides support for product design and development. By helping our customers in the development of their products, we hope to build a trusting and lasting relationship.

CHROMEWELD™ 600

As the equipment is being subjected to the road surface or curb, it's met with high amounts of friction that wears the bottom of the unit. The constant abrasion will deteriorate the cutter housing or paver from the bottom, so enhance its coverage with skid shoes.

The skid shoes take the beating, engaging the ground, requiring frequent replacement, but saves the main equipment. By making this small part with CHROMEWELD™ 600, you'll extend the life of your equipment significantly. With the typical hardness of CHROMEWELD™ 600 is 58-62 HRC, adding it will turn into less downtime and significant cost savings for your job.

Decrease your downtime and maintenance costs with CHROMEWELD™ 600 skid shoes for your asphalt equipment.

JADCO skid shoes are a prerequisite before operating any asphalt machinery; whether you are at the plant or in the field, you will see an increased wear life for your equipment by adding these parts.
